General objective <sup>6</sup>	Characterization of metallic materials (steels), obtained by elaboration, by analysis of metallographic structure and chemical composition.
Specific objectives <sup>7</sup>	Primary and secondary structures analysis for irons and steels, main metallurgical factors that influence irons and steel features (cooling rate, chemical composition, impurities, de-oxidation, boiling, melting rate, superheating degree in liquid state, inoculation, graphitization treatment, alloying, vacuum treatment, using of plasma devices, gases, vibration, heredity etc), for ferrous alloys improvement.
Course description <sup>8</sup>	The characteristics of the formation of iron structures and the influence of certain manufacturing conditions on the characteristics of iron. Manufacture of alloys under different conditions and interference with the iron characteristics obtained. Characteristics of steel structure formation and characterization of steels.
